Employment and Education

Astrophysicist, NASA GSFC, Observational Cosmology Laboratory, 2013-

Senior Research Associate, CITA, University of Toronto, 2011-2013.

Postdoctoral Fellow, Kavli Institute for Cosmological Physics, University of Chicago, 2008-2011.

Ph.D. Physics, Princeton University, 2008.

B.A. Physics (with honors), University of Chicago, 2003.

Dr. Eric Switzer has over 15 years of experience in research related to observations of cosmic background radiation from radio to far-IR wavelengths. His work spans all phases of the project life cycle through concept, design, integration and test, analysis, and data archival. His scientific interests include redshifted line intensity mapping, cosmic microwave background anisotropies, and systems engineering to establish the requirements and design for next-generation missions. Dr. Switzer is PI of the EXCLAIM mission, and led cryogenic receiver and flight software development for the PIPER mission. Before starting at NASA, he led the analysis of 21 cm intensity mapping data acquired with the Green Bank Telescope, worked to develop and commission the Atacama Cosmology Telescope, and developed an accurate theory of cosmological helium recombination.
